

GoodHealth - Customer Notes

Fictional customer interview notes for Memo Pilot demo. Prepared as a text-based PDF for extraction.

Document Type: Customer Notes

Customer Interview Summary

This document summarizes fictional voice-of-customer notes from five GoodHealth customers. The notes are intended to test extraction of qualitative evidence, risks, and diligence questions.

Customer type	Positive feedback	Concern or objection
Multi-location dermatology group	Centralized work queues reduced missed follow-ups and gave managers visibility into backlog.	Initial EHR mapping took longer than expected.
Orthopedics practice	Authorization tracking improved staff accountability and reduced manual spreadsheet usage.	Clinic needed more implementation support than expected.
Cardiology practice	Follow-up reminders helped reduce leakage after visits.	Reporting dashboards were useful but required custom configuration.
Regional health group	GoodHealth helped standardize operations across sites.	Security review and procurement extended the sales cycle.
Specialty clinic network	Expansion to additional provider seats was straightforward after first deployment.	Customer success capacity is important during rollout.

Common Themes

- Customers value visibility into administrative work queues and staff bottlenecks.
- The product appears especially useful in prior authorization, referral intake, and follow-up workflows.
- Implementation quality is a major driver of customer satisfaction.
- Integration complexity is the most common source of delayed value realization.
- Customers want more prebuilt workflow templates for specialty-specific use cases.

Buying Reasons

- Reduce manual spreadsheet tracking and phone/email handoffs.
- Improve accountability for follow-up and authorization tasks.
- Give operations leaders a live view of backlog and cycle time.
- Standardize workflow across clinics and locations.
- Support growth without adding proportional administrative headcount.

Risks Identified in Customer Notes

- Services-heavy onboarding creates scalability risk if the company grows faster than implementation capacity.
- EHR integration variability may create inconsistent customer experience.
- Customers may compare GoodHealth against workflow features added by incumbent EHR vendors.
- Security and procurement processes can slow enterprise and regional group deals.
- Customer success execution is important to expansion revenue and retention.

Questions Suggested by Customer Feedback

- What percentage of implementations are completed within the target 6-10 week timeline?
- How much implementation effort can be standardized through templates or partners?
- Which EHR integrations create the most delays?
- How does GoodHealth measure reduction in missed follow-ups or revenue leakage?
- What workflow modules drive the highest expansion revenue?
