

GoodHealth - Pitch Deck Summary

Fictional company document for Memo Pilot demo. Prepared as a text-based PDF for extraction.

Document Type: Pitch Deck Summary

Company Snapshot

GoodHealth is a healthcare operations software company serving mid-market outpatient clinics. The product helps clinics coordinate scheduling, prior authorization, patient follow-up, referral intake, and administrative work queues from one operating layer. The core buyer is the clinic operations leader who is accountable for staff productivity, patient throughput, and revenue leakage from missed follow-ups.

Problem

- Clinics rely on disconnected systems for scheduling, referral intake, prior authorization, and post-visit follow-up.
- Administrative teams spend significant time moving information between EHR, phone, email, payer portals, and spreadsheets.
- Missed follow-ups and delayed authorizations create revenue leakage and lower patient satisfaction.
- Operations leaders want a workflow layer that improves staff throughput without replacing the EHR.

Product and Value Proposition

- Unified work queue for scheduling, authorization, follow-up, and referral tasks.
- Rules-based task routing for clinic staff and supervisors.
- Patient follow-up reminders and escalation workflows.
- Integration connectors for common EHR and practice management systems.
- Operational dashboards for backlog, cycle time, missed follow-up, and staff workload.

Target Customer and GTM

Customer segment	Description	Current motion
Mid-market clinics	20-250 provider groups with centralized operations teams	Primary ICP; direct sales led by operations pain points
Specialty practices	Orthopedics, cardiology, dermatology, and multi-specialty clinics	Strong fit where prior authorization and follow-up volume is high
Regional health groups	Multi-location clinic groups attached to regional networks	Longer sales cycles; larger ACV and heavier implementation needs

Traction Highlights

- 180 clinic customers as of Q4 2025.
- Average contract value of \$44K annually.

- Sales cycle is typically 4-6 months for mid-market clinics and 6-9 months for regional groups.
- Expansion revenue comes from additional provider seats, more locations, and workflow modules.
- Customer references cite faster follow-up, lower manual work, and better task visibility.

Strategic Rationale

GoodHealth is positioned as a workflow automation layer around existing clinical systems. The company does not need to replace the EHR to create value. The pitch is operational: reduce manual work, improve follow-up discipline, and give clinic leaders visibility into administrative bottlenecks.

Known Concerns From Management Materials

- Onboarding is services-heavy for customers with complex EHR configurations.
- Integration work can slow time-to-value for new customers.
- Sales cycles remain long for regional groups.
- Management has not provided CAC payback by segment in this document.
- Competitive positioning against EHR-native workflow modules requires more diligence.
