

Northstar Clinics - Onboarding Process Review

Workflow notes for customer onboarding, activation, and implementation handoffs.

Onboarding Workflow Metrics

Step	Owner	Current Timing	Observed Friction	Potential Automation
Account setup	Customer Success	2-4 days	Manual setup across Salesforce, Zendesk, and spreadsheets	Checklist automation and setup task routing.
Security questionnaire	Sales / CS	5-10 days	Enterprise buyers ask repeated security questions before kickoff	Reusable response assistant and approval workflow.
EHR mapping	Implementation	7-14 days	Data quality and customer-specific workflow rules slow mapping	Structured intake form and mapping readiness checklist.
Activation review	CS Manager	Week 2	Accounts inactive by week 2 are more likely to stall	Activation risk alerts and Slack notifications.
Go-live follow-up	CS / Support	Week 3-4	No standardized post-launch checklist	Automated milestone reminders and owner assignment.

Operator Observations

Implementation managers spend repeated time asking customers for the same setup information. Regional health groups have higher ACV but slower procurement and heavier integration work. Leadership wants a low-risk automation pilot that can be tested within 30 days.

Activation Risk Signals

Signal	Current Threshold	Reason to Track
No login after kickoff	5 business days	May indicate unclear next steps or missing owner.
Incomplete setup checklist	7 business days	Strong signal that onboarding is stuck.
No completed workflow test	14 days	Accounts that do not activate by week 2 often become inactive.
More than 3 repeated support questions	During onboarding	Indicates knowledge-base or assistant opportunity.
