

Northstar Clinics - Security Questionnaire and Procurement Log

Notes on enterprise procurement friction and repeated security review work.

Security Review Patterns

Pattern	Observed Frequency	Impact	Suggested Review
Repeated questionnaire answers	High	CS and sales copy answers from old documents manually	Centralize approved answers and automate draft responses.
Procurement review delay	Medium-High	Regional health group deals extend by 2-4 weeks	Track procurement status and blockers by account.
Missing security owner	Medium	Questions are routed across sales, CS, and engineering	Assign review owner and approval workflow.
Custom legal/security terms	Medium	Delays contract close and kickoff handoff	Create escalation matrix and standard response library.

Notes from Sales and CS

Sales reports that regional health groups are attractive because ACV is higher, but procurement and security review create unpredictable sales-cycle timing. CS reports that customers often ask similar security and setup questions after signing, which creates duplicated work across teams.

Data Gaps

Data Gap	Question for Operator
Time spent per questionnaire	How many hours are spent answering each security questionnaire?
Win/loss impact	How often do security or procurement delays contribute to lost deals?
Approval workflow	Who is accountable for final security responses?
